

Franklin Public Health Department

April 2015

Vision: All children in Franklin will receive developmental screening using a validated developmental screening tool at 9 months, 18 months and 24 or 30 months of age, as well as any time a parent or clinician has concerns about a child's development. Universal screening of children's development will help ensure all children reach their full developmental potential.

Mission: In collaboration with physicians and community partners, Franklin Public Health Department will promote the use of validated developmental screening tools to increase early identification of children with delays and timely referral to appropriate supports and services.
